Summary of product bulletin:

This bulletin is to inform technicians how to properly install the retrofit CCV kit on the GM 5.7L turbocharged engine. This kit will help keep the CCV system from freezing in cold weather climates. Below is a list of parts and quantities. If your engine does not have an oil cooler you will not have 32502455 or 32500608.

Date of Bulletin – 2/1/2015
Bulletin Number – PSI012015
Category -- Breather Retrofit Instructions
Step 1. Remove the CCV hose and brass breather adaptor from the inlet pipe. Install the new composite fitting, sealing with pipe thread sealant. Do not re-install breather hose yet.

Step 2. Slide the insulating jacket over the hose. Install hose on the composite fitting and secure clamp.
Step 3. Secure both sides of the insulating jacket with provided Zip-Ties.

Step 4. Install oil cooler thermostat. Mount the thermostat in a location where it will not be damaged or come in contact with other parts. Oil flow is shown below. More information about the oil cooler thermostat can be found on the last page of these instructions. Use the included ½” hose as needed to connect thermostat into the system.

Engine Oil Cooler Information
IF YOU HAVE ANY QUESTIONS ABOUT THIS UPDATE PLEASE CONTACT THE PSI SERVICE DEPARTMENT AT 1-888-331-5764 or SERVICE@POWREGREATLAKES.COM

FOR SERVICE PARTS ORDERING INFORMATION CONTACT THE PSI PARTS DEPARTMENT AT 1-888-331-5769 OR PARTS@POWREGREATLAKES.COM

Please read these instructions completely before starting the installation.

RECOMMENDED FOR

- Transmissions
- Engines

IMPORTANT

The Fluid Control Thermostat can be mounted in any position. Reference Diagram #1 & 2 to insure the direction of oil flow is correct.

Engine/Transmission

AFTER COOLER

Oil Cooler (Not included)

Hose Barb Fitting (Not included)

FLUID CONTROL THERMOSTAT INSTALLATION

1. Install the 1/2" NPT x 1/2" Hose Barb Fittings (Not Included) into the four ports using Teflon tape or sealer on the threads.
2. Choose where you want to interrupt both oil lines to install the Fluid Control Thermostat. Thermostat needs to be securely fastened to the vehicle frame, fender well or other stationary location (Mounting Hardware Not Included).
3. Splice into the lines connecting the Engine / Transmission to the Oil Cooler. Following Diagram #1 connect the lines from the Engine / Transmission and the Oil Cooler in the orientation shown above. Be sure the Hot lines are connected to the hot side of the Fluid Control Thermostat and that the oil flows in the direction of the arrows.
4. Securely fasten all hoses before starting the vehicle.
5. Start the engine and check for leaks.

ROUTING HOSES

Warning: When routing hoses, be sure to keep all hoses away from sharp edges, moving parts and hot engine components. Hoses should be routed carefully and should not be bent in less than a 5" radius.

Important: A kinked hose will restrict flow and could cause failure.

Warning: Installation of accessories should only be undertaken by those with mechanical knowledge and are familiar with working on vehicles. Always use eye protection (goggles, safety glasses or shield). Park the vehicle in a well lit area, on level ground and apply the parking brake. Only work on a cold vehicle that has been sitting overnight. Failure to do so will result in severe burns and injury. Before starting the vehicle, make sure no tools or any other items are left under hood that could interfere with or be drawn into moving parts of the engine. Failure to follow instructions can lead to severe damage and personal injury.
